Projects

- **Music Website - Vibify**

Developed an interactive music website using HTML, CSS, and JavaScript to demonstrate web development skills. The site includes features for browsing songs, albums, and artists, with user authentication functionalities.

- **Library Management System**

Engineered a comprehensive Library Management System leveraging data structures such as linked lists, hash tables, and trees. Optimized cataloging, user management, checkout, return processes, and reservation handling.

- **Bank Database Management System**

Designed and implemented a robust Bank Database Management System using SQL and DBMS principles. Facilitated functionalities for adding, updating, and managing account holder records efficiently.

- **Memory Puzzle Game using Python**

Developed an engaging memory puzzle game using Python and Tkinter, focusing on enhancing cognitive skills. The game features hidden shapes that are matched to score points as players reveal pairs.

- **Static Routing Implementation**

Configured static routing on Cisco routers to interconnect distinct network segments. Ensured effective data communication through precise route setup and connectivity verification via ping and traceroute.

- **Puzzle Game using Swing**

Created a user-friendly puzzle game using Java Swing, allowing interactive play and problem-solving with various puzzle elements for a dynamic user experience.
